PROFILE

Business Analyst for internal IT systems and support operations, from solution selection and requirements to release planning, root cause analysis and automation. Draws on 7 years across customer support, quality and process improvement to translate operational needs into requirements for developers and vendors. Track record includes operational improvements for more than 80 customer-facing employees and a quality assessment system that lets managers compare performance across teams, covering 2 departments and more than 30 people. Understands the problem before designing the solution, and stays involved through implementation and user adoption.

CORE SKILLS

Requirements elicitation and prioritisation; AS-IS / TO-BE analysis; process mapping; gap analysis; root cause analysis; options and cost-benefit analysis; total cost of ownership (TCO) analysis; usage-based cost modelling; roadmap planning; business rules; business and software requirements documentation (BRD/SRS); use cases; user stories and acceptance criteria; requirements traceability; test planning and user acceptance testing (UAT); release planning (acceptance and stop criteria, rollback); SOP and troubleshooting documentation; stakeholder management; vendor communication.

PROFESSIONAL EXPERIENCE

Business Analyst | T-1000, Riga

02/2025 - Present

- Drove the support chat integration project from reassessment: assessed alternatives against business and technical requirements, selected Chatwoot as the best fit and secured stakeholder agreement; proposed self-hosting to overcome regional availability limitations.
- Documented requirements and developer tasks; planned the release with acceptance and stop criteria and rollback procedures; coordinated the pilot as a regional canary release and used its findings to identify further refinements.
- Investigated a recurring data exchange defect between a client's internal system and an external payment system: compared successful and unsuccessful records and traced the cause to a workflow sequencing issue. Developers used the findings to redesign the process, eliminating the defect and the need for related manual corrections.
- Developed a versatile internal tool for payment presets, used daily by operational teams and management and available to more than 80 employees; automated data updates that previously required substantial manual work.
- Designed improvements to internal tools, including expanded logging of a broad range of user actions relevant to customer support; implemented by developers and used by employees daily.
- Run AS-IS / TO-BE and gap analysis, then elicit and prioritise requirements through stakeholder interviews and workshops; translate them into user stories and acceptance criteria, clarifying rules, data requirements and edge cases.
- Review requirements with developers and validate implemented business logic; maintain requirements traceability, plan testing and coordinate UAT, configuration and rollout, supporting users through onboarding and adoption.
- Develop workflow automations and spreadsheet-based tools for request handoffs, notifications, workforce management reporting and converting support requests into bug reports; established a release-notes process and expanded it into sprint digests for a wider internal audience.

Quality Coach | T-1000, Riga
09/2023 - 02/2025

- Initiated and implemented a Google Sheets system for quality assessment and performance reporting across 2 departments with more than 15 employees each, including an English version for Asian markets.
- Defined weighted assessment criteria and business rules, secured stakeholder agreement and supported onboarding; the system keeps individual bonus information private and synchronises data automatically, letting managers compare performance over time and across teams.
- Authored more than 20 SOPs and troubleshooting guides based on own investigations and process analysis; also introduced how-to articles to support agents at different technical levels.
- Reviewed customer support interactions, identified performance gaps and delivered individual coaching, workshops and targeted feedback.
- Designed and delivered training academies, from curriculum development through onboarding and follow-up coaching, covering support processes and practical technical skills.
- Supported the department head with workflow analysis and maintained procedural guidance and training materials to improve consistency across the team.
- Built and continuously maintained a multilingual library of prepared responses.
- Introduced a structured process for addressing performance gaps, including individual performance improvement plans (PIP).

Quality Coach | Webhelp, Riga
11/2022 - 07/2023

- Evaluated support interaction quality and coached advisors through case reviews, observation, feedback and practical demonstrations; worked with Quality Managers to analyse individual and programme-level performance, identify recurring gaps and deliver targeted training and workshops.

Senior Technical Customer Support | Webhelp, Riga
07/2019 - 11/2022 (Technical Customer Support 07/2019 - 04/2021; Senior from 04/2021)

- Provided outsourced technical support in English and Russian for devices running iOS, iPadOS, watchOS and macOS, related peripherals, applications and digital services.
- Managed complex technical escalations in proprietary case-management systems and maintained case ownership through resolution; met service KPIs and shared troubleshooting knowledge through mentoring and experience-sharing sessions for less experienced advisors.

TOOLS AND TECHNICAL SKILLS

- **Spreadsheets and automation:** Google Sheets (advanced formulas, data imports, dashboards, scripted workflows); Make, Zapier, Slack Workflows.
- **Project and documentation tools:** Asana, YouTrack, Confluence, Jira (coursework).
- **Support platforms:** Chatwoot, Intercom. Browser DevTools: network requests and transmitted data.
- **Delivery:** Scrum, Kanban, Waterfall and hybrid approaches; software development life cycle (SDLC).
- **SQL:** basic knowledge (SQLBolt); ongoing professional development.
- **AI-assisted analysis and documentation:** ChatGPT (daily use), Claude, Gemini; used for reviewing analysis from alternative perspectives, identifying gaps and contradictions, structuring plans and drafts, improving document clarity, and developing and debugging formulas and scripts.

EDUCATION

- Bachelor's degree in Information Technology | Faculty of Computer Science and Information Technology, Riga Technical University | 2019 - 2023
- High School Education | Riga Zolitude Gymnasium, Riga | 2016 - 2019

CERTIFICATIONS AND TRAINING

- Atlassian Agile Project Management - Atlassian University
- Confluence Essentials - Atlassian University
- Business Analysis Basics - Simplilearn
